University of Zenica Metallurgical Institute "Kemal Kapetanović" Zenica

The Metallurgical Institute "Kemal Kapetanović" of the University of Zenica (formerly known as "Hasan Brkić" Institute) has existed and successfully operated for 48 years.

The Institute, whose founder was "Željezara Zenica" Zenica, started its work in 1961 with 165 employees.

Intensive development of steel industry in that time as well as the need for usage of world achievements were the motive for establishing one professional institution capable of solving present technology-

related issues that will be dedicated to the scientific and research work in that sector.

For that purpose, the Institute was registered as scientific and research institution in the field of steel industry and other similar branches. During the development, the Institute has been accommodating to institutional changes that have been conditioned primarily by market and legal requirements.

Today, the Metallurgical Institute works as an organizational unit of the University in Zenica and, with its professional and experienced staff working in the accredited laboratories, it provides viable solutions to the demands of business society. Besides steel and non ferrous metals, the Institute has expanded its operations towards other materials such as stone, oil, coal, water, air, etc.

Activities of the Metallurgical Institute "Kemal Kapetanović" Zenica include the following:

- research and experimental development in natural and technical sciences,
- architectural operations, mechanical engineering and technical consulting
- technical testing and analysis
- adult education,
- IT equipment & software consulting,
- data processing.

Within the scope of its registration acts, the Institute may undertake production of small quantity of products and items which are results of the Institute's scientific research.
